SUPPLEMENTARY INFORMATION:

I. Background

This guidance document is intended for manufacturers, and any other entities legally responsible for the labeling of IVD products that are distributing such products they have labeled RUO or IUO (subsequently referred to collectively as "manufacturers"). This guidance is intended to provide the current thinking of CDRH and CBER on when IVD products are properly labeled RUO and IUO.

This guidance is being issued because FDA is concerned that the distribution of unapproved and uncleared IVD products labeled RUO or IUO, but intended for purposes other

than research or investigation (for example, for clinical diagnostic use¹), has led, in some cases, to the diagnostic use of products with unproven performance characteristics, and with manufacturing controls that are inadequate to ensure consistent manufacturing of the finished product. Use of such tests for clinical diagnostic purposes may mislead healthcare providers and cause serious adverse health consequences to patients who are not aware that they are being diagnosed with or treated based on the results of tests with research or investigational products. This guidance is thus intended to remind manufacturers that RUO and IUO labeling must be consistent with the manufacturer's intended use of the device.

In the Federal Register of June 1, 2011 (76 FR 31615), FDA announced the availability of the draft guidance document under the title "Draft Guidance for Industry and Food and Drug Administration Staff: Commercially Distributed In Vitro Diagnostic Products Labeled for Research Use Only or Investigational Use Only: Frequently Asked Questions." Interested persons were invited to comment by August 30, 2011. The FDA received 55 sets of comments regarding the guidance. As a result of these comments, FDA revised the guidance and changed its format. Due to these revisions, FDA also changed the name of the guidance document.

II. Significance of Guidance

This guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The guidance represents the Agency's current thinking on "Distribution of In Vitro Diagnostic Products Labeled for Research Use Only or Investigational Use Only." It does not create or confer any rights for or on any person and does not operate to bind FDA or the public. An alternative approach may be used if such approach satisfies the requirements of the applicable statute and regulations.

¹ Throughout this guidance document, references to "clinical diagnostic use" and "use in clinical diagnosis" include
